PRODUCT DEVELOPMENT, DESIGN & AI SYSTEMS INTERN

CANDIDATE ASSIGNMENT | EXPECTED EFFORT: 4–5 HOURS

About the role

I'm building **Practo for Animals**, an animal-care discovery platform, alongside an AI-enabled education and content ecosystem. I'm looking for someone who can work directly with the founder to turn ideas into well-designed digital products, landing pages and automated AI workflows. The role combines product thinking, UI/UX design, AI tools, website development and automation.

1. Practo for Animals — MVP Design

Design a homepage or search-page prototype for an animal-care discovery platform where users can find veterinary clinics, hospitals, boarding facilities, diagnostics, ambulances and NGOs.

Explain: essential MVP elements and features; useful filters and provider information; key CTAs (e.g. Find a Vet, Explore Services, List Your Business, Submit a Correction); and how you would make the experience attractive, intuitive and mobile-friendly.

Deliverable: A polished homepage/search-page wireframe or clickable prototype.

2. AI Education — Course Landing Page

Design a landing page for practical AI and digital-skills programmes aimed at students and young professionals.

Explain the page structure, value proposition, key registration/enquiry CTAs, and how the registration and lead-capture journey would work.

Deliverable: A visually appealing landing-page prototype or design.

3. AI-Powered Content Creation System

Design a workflow that lets the founder create high-quality Instagram and LinkedIn carousels independently, without hiring an in-house graphic designer.

Workflow to consider: Founder enters a raw idea → AI researches and structures it → generates headlines and slide-by-slide copy → creates visual direction, layout and design → produces an editable, ready-to-publish carousel → founder reviews, makes minor edits and exports.

Explain which AI tools, design platforms and automation integrations you would use, and how you would connect them into a simple, repeatable workflow.

Deliverable: One sample carousel created using your proposed workflow, plus a simple workflow diagram or explanation.

Submission requirements

- MVP homepage/search-page design
- Course landing-page design
- One AI-generated carousel
- Brief explanation of recommended tools, technology stack, CTAs and automation workflow
- Links to prototypes or demonstrations, wherever possible

Expected effort: 4–5 hours. You may use Claude, ChatGPT, Gemini, Canva, Figma, Lovable, Replit, Make, n8n or alternatives.

Evaluation criteria

Skill	Weight
UI/UX and visual design quality	30%
Product thinking and CTA strategy	20%
AI workflow and automation	25%
Technical execution and tool selection	15%

Initiative and communication	10%

What we're looking for: Someone who can independently take a founder's rough idea, translate it into a polished digital experience, identify the right tools and build systems that make future execution faster and easier.
